

## **CPI – brief: The CPI team in a nutshell**

The CPI is allocated within the AG2 Socialisation at the Faculty of Educational Science at Bielefeld University. Besides the heading professor, the team currently consists of seven researchers from various scientific fields and from different professional backgrounds. Please see below, the CPI team presented in a nutshell.

Ullrich Bauer is Professor of socialisation research and specializes in the development of children and adolescents. His special focus is on the education and health sectors. He is trained in sociology, psychology and history, he received his doctorate in health sciences and has held professorships in public health and the educational sciences.

Paulo's professional background is in medicine and public health. His current research activities comprise health promotion and primary prevention, health education and socialisation, and health literacy of children and adolescents.

Zoe Clark is educational scientist and holds a PhD in Human Development in Social and Cultural Research; her main research areas are intersectional social and educational inequality during childhood and youth, theories of justice (mainly the Capabilities Approach) and quantitative methods of social research.

Pablo Zamora's background is sociology and public health. Currently his key areas of activities include project and science management as well as academic administration. His principal research field is the practice-related health care research, having collected extensive experience in studies with focus on health care organisation / management, integrated health care and evaluation research.

Ester is a childhood researcher and PhD student with a professional background in school teaching, inclusive education and sports sciences while her expertise area is Dolphin Assisted Therapy. She is trained in qualitative and quantitative methods and her main research areas are child Health and Well-Being and Health Literacy.

Dirk's background is in public health and social pedagogy. The main emphasis of his research is paediatric and adolescent psychiatry while he is specialised in education and child development in the context of clinical (setting) environment and consideration of psycho-social factors within.

Janine studied European Public Health and Health Sciences at Maastricht University. Her research is focused on health literacy in childhood and adolescence, synthesising perspectives of health promotion and prevention, child development, socialisation and literacy.

Orkan is a primary and secondary school teacher trained in German language, mathematics, sociology, history, politics, geography, and economy. Based in socialisation research, his main areas of interest are health socialisation and health literacy.

We are looking forward to informing the audiences around the world on science and research.
